G3-MP3 Director shown — 7 7/8"w x 1 1/4"h x 4"d

- Plays MP3 audio files while directing two networks of Light-O-Rama controllers
- Stereo line outputs to drive your audio system
- Eliminates the need for a Windows PC to run shows
- Uses an SD card to store shows, schedules and triggers
- Available stand-alone as shown to the left or as part of the LOR1602MP3g3 Show-in-a-Box controller
- Supports two high-speed networks for displays containing RGB pixels
- On board real time clock for scheduled shows
- Shows on the SD card can be run continuously, be scheduled and/or be triggered
- Up to nine shows, each show consisting of multiple sequences (lighting and servo commands possibly choreographed to audio)
- Six trigger inputs allow external events to start one of six shows

Now you can run your shows without a Windows PC. Great for commercial and/or outdoor applications where there is no place for a Windows PC. Also great for Halloween applications using the input triggers to start a show. The G3-MP3 Director will play the lighting animation sequence files and their associated MP3 audio files.

Supports two 500Kbps networks for larger displays containing large number of RGB pixels.

SD cards up to 8GB are supported. For 128Kbs encoded MP3 music files and average size corresponding sequence files, a 500 MB SD card will hold about four hours of lighting commands and audio.

Pop out the SD card at any time and insert another to switch shows and/or schedules. The G3-MP3 Director will start the new SD card shows when the card is inserted, as specified by the schedules and/or in response to input triggers.

Can be powered by a controller, so you just turn on power to the controller to start the show. Or, it can be powered by a 12VDC power brick that you can turn on and off to control the show.

Includes 500MB SD card and USB SD card reader/writer for PC
